Slide 36:

d^n

Slide 38:

Probability that it's hot and sunny
0.4

Probability that it's hot
0.5

Probability that it's hot or sunny
0.7

Slide 39:

$P(+x, +y) =$
0.2

$P(+x) =$
0.5

$P(-y \text{ OR } +x) =$
0.6

Slide 41:

$P(X)$
0.5
0.5

$P(Y)$
0.6
0.4

Slide 42:

Supplement with this equation: $P(a,b) = P(a \cap b) = P(a|b)P(b)$

Slide 44:

Conditional probability formula:

$$P(+x \mid +y) = P(+x, +y) / P(+y) = 0.2 / (0.2+0.4) = 1 / 3$$

$$P(X = \text{true} \mid Y = \text{true}) = \dots$$

$$P(-x \mid +y) = P(-x, +y) / P(+y) = 0.4 / (0.2+0.4) = 2 / 3$$

(this also follows from the above, i.e., $1 - P(+x \mid +y)$)

$$P(-y \mid +x) = P(-y, +x) / P(+x) = 0.3 / (0.2+0.3) = 0.6$$

Slide 48:

X	Y	P(X, -y)
+x	-y	0.3
-x	-y	0.1

X	Y	P(X -y)
+x	-y	0.75
-x	-y	0.25

Slide 59

D	W	P(D,W)
wet	sun	$.8 * .1 = .08$
dry	sun	$.8 * .9 = .72$

wet	rain	$.2 * .7 = .14$
dry	rain	$.2 * .3 = .06$

Slide 60:

$$P(x|y) = \frac{P(x, y)}{P(y)}$$

Conditional Probability:

Why is $P(x_1) P(x_2 | x_1) P(x_3 | x_1, x_2) = P(x_1, x_2, x_3)$?

Note that $P(x_2 | x_1) = P(x_2, x_1) / P(x_1)$

It follows that $P(x_1) P(x_2 | x_1) P(x_3 | x_1, x_2) = P(x_1) (P(x_2, x_1) / P(x_1)) P(x_3 | x_1, x_2)$

Note that $P(x_3 | x_1, x_2) = P(x_3, x_1, x_2) / P(x_1, x_2)$

It follows that $P(x_1) P(x_2 | x_1) P(x_3 | x_1, x_2) = P(x_1) * P(x_2, x_1) / P(x_1) * P(x_3, x_1, x_2) / P(x_1, x_2)$
 $= P(x_3, x_2, x_1) = P(x_1, x_2, x_3)$

$$P(x_1, x_2, \dots, x_n) = \prod_i P(x_i | x_1 \dots x_{i-1})$$

What does this notation mean:

Consider $n = 4$

$P(x_1)$ [i=1]

$P(x_2 | x_1)$ [i=2]

$P(x_3 | x_1, x_2)$ [i=3]

$P(x_4 | x_1, x_2, x_3)$ [i=4]

Putting it all together: $P(x_1, x_2, \dots, x_4) = P(x_1) P(x_2 | x_1) P(x_3 | x_1, x_2) P(x_4 | x_1, x_2, x_3)$

Similar to the above case we can prove that this is always true.

Slide 63:

Given: $P(+m) = 0.0001$, $P(+s \mid +m) = 0.8$, $P(+s) = 0.01$

$$P(+m \mid +s) = P(+s \mid +m) P(+m) / P(+s) = 0.8 * 0.0001 / 0.01 = 0.008$$

Note: posterior probability of meningitis still very small, why should you still get stiff necks checked out?

Slide 64:

D	W	P(D W)
wet	sun	0.1
dry	sun	0.9
wet	rain	0.7
dry	rain	0.3

W	P(W)
sun	0.8
rain	0.2

Method 1:

$$P(\text{sun} \mid \text{dry}) = P(\text{dry} \mid \text{sun}) / P(\text{dry}) * P(\text{sun})$$

$$P(\text{dry}) = P(\text{dry}|\text{sun})P(\text{sun}) + P(\text{dry}|\text{rain})P(\text{rain}) = 0.9 * 0.8 + 0.3 * 0.2 = 0.78$$

$$P(\text{sun} \mid \text{dry}) = P(\text{dry} \mid \text{sun}) * P(\text{sun}) / P(\text{dry}) = 0.9 * 0.8 / 0.78 = 0.72 / 0.78$$

$$P(\text{rain} \mid \text{dry}) = P(\text{dry} \mid \text{rain}) * P(\text{rain}) / P(\text{dry}) = 0.3 * 0.2 / 0.78 = 0.06 / 0.78$$

Method 2:

Note: $P(\text{sun} \mid \text{dry}) + P(\text{rain} \mid \text{dry})$ should be 1.0 We need to normalize!

Let use z instead of $P(\text{dry})$ to normalize.

$$P(\text{sun} \mid \text{dry}) = P(\text{dry} \mid \text{sun}) / z * P(\text{sun}) = 0.9 * 0.8 / z = 0.72 / z$$

$$P(\text{rain} \mid \text{dry}) = P(\text{dry} \mid \text{rain}) / z * P(\text{rain}) = 0.3 * 0.2 / z = 0.06 / z$$

$$z = 0.78$$

Slide 72:

$T \perp\!\!\!\perp C$

$W \perp\!\!\!\perp C$

Tasmania

Slide 77:

We want to show that

$$P(x,y|z) = P(x|z) P(y|z)$$

Is the same as

$$P(x|z,y) = P(x|z)$$

Let's assume $P(x,y|z) = P(x|z) P(y|z)$ is given.

Consider $P(x|z,y) = P(x,z,y) \setminus P(z,y)$ from the definition of conditional probability

Using $P(x,z,y) = P(x,y|z) P(z)$ we get

$$P(x|z,y) = P(x,z,y) \setminus P(z,y) = P(x,y|z) P(z) \setminus P(z,y)$$

Using our assumption $P(x,y|z) = P(x|z) P(y|z)$ we get

$$P(x|z,y) = P(x|z) P(y|z) P(z) \setminus P(z,y)$$

Note that $P(y|z)P(z) = P(z,y)$ (product rule)

It follows that $P(x|z,y) = P(x|z)$

Slide 79:

$$T \perp\!\!\!\perp U \mid R$$

If we know whether it is raining or not, then the umbrella doesn't tell us anything more about traffic

$$A \perp\!\!\!\perp F \mid S$$

Alarm is independent of fire given smoke. Once I know there is smoke, fire doesn't tell me anything more about whether the alarm will go off or not.

Slide 82:

1.

$$P(+g, +a, +b, +s) = P(+g)P(+a|+g)P(+b|+g, +a)P(+s|+g, +a, +b)$$

Assuming: $G \perp\!\!\!\perp S \mid A$, $A \perp\!\!\!\perp B$, $G \perp\!\!\!\perp B$

$$P(+g, +a, +b, +s) = P(+g)P(+a|+g)P(+b)P(+s|+a, +b)$$

$$P(+g, +a, +b, +s) = P(+g)P(+a|+g)P(+b)P(+s|+b, +a) = (0.1)(1.0)(0.4)(1.0) = 0.04$$

2.

$$P(+a) = P(+a|+g)P(+g) + P(+a|-g)P(-g) = (1.0)(0.1) + (0.1)(0.9) = 0.19$$

3.

$$P(+a|+b) = P(+a) = 0.19$$

4.

$$P(+a|+s, +b) = P(+a, +b, +s) / (P(+a, +b, +s) + P(-a, +b, +s)) = (0.19)(0.4)(1.0) / ((0.19)(0.4)(1.0) + (0.81)(0.4)(0.8)) = 0.2267$$

$$P(+g|+a) = P(+g)P(+a|+g) / (P(+g)P(+a|+g) + P(-g)P(+a|-g)) = (0.1)(1.0) / ((0.1)(1.0) + (0.9)(0.1)) = 0.5263$$

$$P(+g|+b) = P(+g) = 0.1$$

Slide 83:

$$P(-e, -s, -m, -b) = P(-e)P(-m)P(-s|-e, -m)P(-b|-m) = (0.6)(0.9)(0.9)(0.9) = 0.4374$$

$$P(+b) = P(+b|+m)P(+m) + P(+b|-m)P(-m) = (1.0)(0.1) + (0.1)(0.9) = 0.19$$

$$P(+m|+b) = P(+b|+m)P(+m) / P(+b) = 0.5263$$

$$P(+m|+s, +b, +e) = P(+m, +s, +b, +e) / (\sum_m P(m, +s, +b, +e)) = (0.4)(0.1)(1.0)(1.0) / ((0.4)(0.1)(1.0)(1.0) + (0.4)(0.9)(0.8)(0.1)) = 0.5814$$

$$P(+e|+m) = P(+e) = 0.4$$

Slide 87:

According to the chain rule slide 59

$$P(X_1, X_2, X_3, X_4) = P(X_1)P(X_2|X_1)P(X_3|X_2, X_1)P(X_4|X_3, X_2, X_1)$$

\Leftrightarrow because $X_3 \perp\!\!\!\perp X_1 \mid X_2$

$$P(X_1, X_2, X_3, X_4) = P(X_1)P(X_2|X_1)P(X_3|X_2)P(X_4|X_3, X_2, X_1)$$

\Leftrightarrow because $X_4 \perp\!\!\!\perp \{X_1, X_2\} \mid X_3$

$$P(X_1, X_2, X_3, X_4) = P(X_1)P(X_2|X_1)P(X_3|X_2)P(X_4|X_3)$$

Slide 90:

Assume: $X_3 \perp\!\!\!\perp X_1 \mid X_2$ and $X_4 \perp\!\!\!\perp X_1, X_2 \mid X_3$

$$\begin{aligned} P(X_1 \mid X_2, X_3, X_4) &= \frac{P(X_1, X_2, X_3, X_4)}{P(X_2, X_3, X_4)} \\ &= \frac{P(X_1)P(X_2 \mid X_1)P(X_3 \mid X_2)P(X_4 \mid X_3)}{\sum_{x_1} P(x_1)P(X_2 \mid x_1)P(X_3 \mid X_2)P(X_4 \mid X_3)} \\ &= \frac{P(X_1, X_2)}{P(X_2)} \\ &= P(X_1 \mid X_2) \end{aligned}$$

First = follows from conditional probability definition

Second = follows from conditional independence assumptions made and marginal dist. definition

Third = follows from product rule and marginal dist. definition

Fourth = follows from the definition of conditional probability

Slide 93:

Why is $P(X_2=\text{sun}) = P(X_2|\text{sun}) P(X_1=\text{sun}) + P(X_2=\text{sun}|X_1=\text{rain})P(X_1=\text{rain})$?

According to the product rule: $P(X_1, X_2) = P(X_2|X_1)P(X_1)$

Then get the marginal: $P(X_2) = P(X_2|X_1=\text{sun})P(X_1=\text{sun}) + P(X_2|X_1=\text{rain})P(X_1=\text{rain})$

Slide 94:

$P(X_3 = \text{sun}) = P(X_3 = \text{sun} | X_2 = \text{sun})P(X_2 = \text{sun}) + P(X_3 = \text{sun} | X_2 = \text{rain})P(X_2 = \text{rain})$

$P(X_3 = \text{sun}) = .9 * 0.9 + 0.3 * 0.1 = 0.84$

$P(X_3 = \text{rain}) = P(X_3 = \text{rain} | X_2 = \text{sun})P(X_2 = \text{sun}) + P(X_3 = \text{rain} | X_2 = \text{rain})P(X_2 = \text{rain})$

$P(X_3 = \text{rain}) = .1 * 0.9 + 0.7 * 0.1 = 0.16$
